Fly with Exos → Fly from Montana

Reusable suborbital flight for Montana researchers and companies — starting in 2027.

Put your payload on BLK3 in 2027 from Exos's current launch site. When the Montana spaceport is licensed and operating, Montana customers get first-flight priority from home. Exos has flown commercial payloads since 2018 on SARGE; BLK3 is its enhanced successor and Exos's latest FAA-licensed launch vehicle.

THE OFFER

- Fly on BLK3 in 2027 from Exos's current launch site.
- First-flight priority from Montana once the Montana spaceport, planned with the Montana Spaceport, is licensed and operating.
- One team from first call to recovered hardware: payload integration, flight and recovery.

WHAT BLK3 GIVES YOUR PAYLOAD

- Up to ~135 kg payload bay on a reusable suborbital vehicle.
- Hardware comes back: BLK3 is built to be recovered and reflown, and your payload returns for post-flight inspection.
- A real flight environment (launch loads, vibration, altitude and a microgravity coast) plus flight data to support TRL advancement.
- Confidential operations for sensitive research and test articles.

WHO IT'S FOR

- University space labs and student teams moving up from CubeSats, balloons and sounding rockets.
- Photonics, sensor and instrument companies qualifying hardware before orbit.
- Defense and government test programs: EO/IR, electronics, radiation-tolerant computing.
- Tribal colleges and STEM programs flying sponsored student payloads.

HOW TO FUND A SLOT

- NASA Flight Opportunities (TechFlights) and the NASA TechRise Student Challenge.
- Montana Space Grant Consortium and NASA EPSCoR (Montana).
- SBIR/STTR (NASA, DoD) with Exos as the flight provider.
- State, industry and alumni sponsors co-funding research and student payloads.

Published list rate: $7,500 per kg. Every quote is sized to your payload — contact us for pricing.

Next step: talk to the Montana Spaceport (Edgar · edgar@montanaspaceport.com). He introduces you to the Exos payload team, who scope your payload, flight profile and funding path.

The Montana spaceport is planned and in development; it is not yet licensed or operating. BLK3 flight dates depend on vehicle readiness and FAA licensing. exosaero.com
