[DRAFT — NON-BINDING — FOR DISCUSSION ONLY — REQUIRES COUNSEL REVIEW BEFORE TRANSMISSION]

LETTER OF INTEREST
Strategic Partnership and Investment Discussion
Exos Aerospace Systems & Technologies, Inc. and Starfighters Space, Inc. (NYSE American: FJET)

October 6, 2026 | DRAFT — Not for distribution

Dear Tim,

Thank you for the relationship we have been building over the past months, including our mutual NDA, the MOU discussions, and the AEDC Velocity Alliance teaming work. I wanted to put forward a more structured set of ideas for how Exos and Starfighters can create value together as we head into late 2026 and 2027.

This letter is a non-binding expression of interest only. Nothing here constitutes a commitment, offer, or agreement. All terms discussed below are subject to definitive documentation, satisfactory due diligence, and approval by each company's board of directors. Exos will not proceed on any securities-related matter without review by our legal counsel. Starfighters' obligations as a public company are acknowledged, and we will manage this discussion in strict compliance with applicable securities laws, including material non-public information (MNPI) obligations.

1. WHY EXOS AND STARFIGHTERS

Exos Aerospace Systems & Technologies, Inc. is a Texas-based reusable launch company. Exos has flown commercial payloads since 2018 on its SARGE vehicle. Block 3 (BLK3), the enhanced successor to SARGE, is FAA-licensed for reusable suborbital flight (license issued March 2026), with the first commercial flight of BLK3, our latest FAA-licensed vehicle, planned for early 2027.

Starfighters operates a commercial fleet of supersonic aircraft and is developing the STARLAUNCH air-launch program from Kennedy Space Center. STARLAUNCH 1 has completed wind tunnel testing (Mach 0.85 and 1.3, January 2026), and Starfighters has established partnerships with Blackstar Orbital for hypersonic captive-carry flight testing and with Integrated Launch Solutions for mission engineering and range integration.

Together, Exos and Starfighters offer a test-and-qualification capability ladder that covers supersonic captive-carry flight test (above Mach 2, FJET) through reusable suborbital launch above 85 km (Exos BLK3). We believe this ladder addresses a validated, growing demand from DoD, NASA, and commercial customers for affordable, frequent flight-test access to supersonic and near-space environments.

2. PROPOSED AREAS FOR DISCUSSION

A. Joint Venture / Teaming Agreement with Warrants

Formalize our working relationship into a binding teaming agreement covering joint bid pursuit for government and commercial flight-test programs. The teaming structure would include a mutual non-circumvention provision, a revenue-sharing framework for jointly won contracts, and warrant instruments (to be structured in compliance with applicable securities laws) that align our long-term incentives. This path can close in 30–60 days and directly supports our combined AEDC Velocity Alliance and AFRL pursuits.

B. Strategic Equity Investment by Starfighters in Exos

We would welcome a discussion of a strategic equity investment by Starfighters in Exos, subject to applicable securities exemptions and Counsel review on both sides. Exos's most recent 409A independent valuation (March 31, 2026) provides a reference point for this discussion. A strategic investment would deepen the relationship, provide Starfighters strategic exposure to Exos's BLK3 flight cadence and reusable-launch upside, and accelerate our combined government program pursuit. We understand that any Starfighters investment decision would require FJET board approval and compliance with NYSE American rules.

C. Launch-Service Commercial Arrangement

Exos would consider a launch-service prepayment or mission deposit structure that provides Starfighters with access to BLK3 launch slots at published service rates. This creates a concrete near-term commercial relationship and may be paired with the warrant structure described in Item A. Exos's BLK3 payload bay (135 kg, altitude above 85 km, FAA-licensed) is complementary to STARLAUNCH's air-launch profile and may serve a different portion of customer payloads.

3. WHAT WE ARE NOT PROPOSING

To be clear, this letter does not propose any acquisition of, or by, either party; and does not constitute an offer to purchase FJET shares or to sell Exos shares on any basis other than through a properly disclosed offering process with counsel engaged on both sides. All securities-related discussions are subject to applicable securities exemptions and Counsel review.

4. OUR COMMITMENT

Exos is committed to a relationship with Starfighters that creates durable value for both companies and their stakeholders. We approach this as a partnership between two mission-driven teams that believe the commercial aerospace test-infrastructure market is at an inflection point driven by defense modernization and generational demand for affordable, frequent flight qualification.

We look forward to a substantive conversation in late October and are happy to have our counsel coordinate with yours on any of the topics above.

Sincerely,

John Quinn
