Exos Shop — Receiving & Inventory Quick Start

Mission Control on the bench iPad. Every part tracked from the PO to the build.

1 · Open Mission Control

On the iPad, open the browser → **mc.exosaero.space** → log in → tap ■ **Receiving**.

2 · Pick the QuickBooks PO

Search by **PO #** or **vendor** and tap it.

3 · Add the parts — two ways

■ **Photo (fastest):** tap **Photo the packing list / parts**, shoot the packing slip. It reads it and **fills in the lines for you** in a few moments — check the Qty.

By hand: search the BOM and tap each part received.

Then set **Unit $** (from the slip) and **Location** (bin) on each line.

4 · Check in

Tap **Check in received parts.** Inventory on-hand, location, and cost update automatically, stamped to the PO.

5 · As-built photo (optional)

On the build task → Documents → ■ **Take Photo** → **this task**.

6 · Check inventory — ■ Inventory

On-hand, location, and what's **short** (red). ■ **Legend** = colors; ■ **Locations map** = bins.

7 · Using parts in a build

When you install/use a part, record it as **consumed** against the job. Ask **@exo** if unsure.

Tips:

- The photo read is a **draft** — always eyeball the Qty before checking in.
- Re-photographing a logged part just adds the photo — it won't change the count.
- Need a login/access code? It's in the Vault: **vault.exosaero.space**. Questions → **@exo**.
