EXOS AEROSPACE — REGULATION D (RULE 504) EQUITY OFFERING

$500,000 Needed · Common Stock · Target Close 30 Days

Exos Aerospace Systems & Technologies, Inc. · 299 FM 1903, Greenville, TX 75402 · www.exosaero.com

CONFIDENTIAL — for existing and qualified investors only

The Offering

- **Instrument:** Common stock, issued under our ongoing Regulation D (Rule 504) offering
- **Capital needed:** $500,000
- **Price:** current offering price [$____ per share]
- **Target close:** within 30 days
- **Eligibility:** existing and qualified investors

Use of Proceeds — straight to a value inflection

This $500,000 is the capital required to **complete the BLK3 build and Critical Design Reviews — with outside engineering support and independent evaluation — and stand the vehicle up for Launch 0**, while we fill the payload manifest over the coming months. It carries us to our first contracted commercial flight (entX / Project Lazarus, launch services agreement executed, **$840K customer-funded**) and the second flight. **Two successful flights above 85 km open the NASA Flight Opportunities on-ramp — a recurring ~$1M-per-flight revenue line** — and set up a targeted **3-day reflight that would establish a new industry reusability record.** This is the near-term catalyst ahead of the Series A.

A Timing Point

Our **2026 independent 409A valuation is being finalized now and is tracking to an increase** over the prior mark. Participating at the **current offering price, before that valuation updates,** is the better entry — a good moment to step in.

Why Exos, Why Now

- **One of only 3 U.S.-licensed reusable suborbital providers** — FAA reusable launch license secured (March 2026) on the BLK3 PSRLV.
- **First commercial flight booked** ($840K customer-funded); a **second BLK3 flight in active sales**, with one of the only active reusable suborbital manifests in the market while Blue Origin's New Shepard remains paused.
- **NASA Flight Opportunities on-ramp** opens recurring per-flight revenue once two >85 km flights are flown.
- **Active USAF SBIR Phase II** — Exos is contracted to build an **HVRR flight vehicle to flight-test a government-furnished (GFE) RDRE**, establishing a sole-source Phase III pathway.
- **Pursuing $4M in non-dilutive funding** — a **$2M USAF TACFI request** plus a **$2M Texas Space Commission SEARF direct-award request** (SEARF Direct Award, Chapter 482, Texas Government Code) — to match and extend this raise.
- SSLC tank partnership — Exos holds an 18% equity stake in Scorpius Space Launch Company (SSLC), whose Type-V cryogenic tanks flew on Intuitive Machines' IM-1 Odysseus and IM-2 Athena lunar landers. Exos integrates SSLC tanks and is SSLC's sales channel: Exos earns a 15% commission on SSLC tank hardware it sells (customers pay SSLC's own price, no markup), and the same 15% applies to SSLC tanks Exos buys — effectively a rebate on the tanks we integrate.
- A **Series A (up to $25M)** follows; participants come in ahead of it.
