MEMORANDUM FOR RECORD

FROM: AFRL/RJPE

SUBJECT: Endorsement Exos Aerospace RDRE Reusable Launch Vehicle Development Program TACFI Proposal

1. The purpose of this letter of support is to document interest from a Department of the Air Force Organization in Exos Aerospace Systems & Technologies Inc.'s TACFI proposal.

2. The Air Force Research Lab has a relevant national Defense-related mission need in the areas of high thrust, lightweight missile interceptors and long-range precision fires. Exos Aerospace is well positioned to execute this program. They hold an FAA reusable launch vehicle license. Their BLK3 platform has demonstrated as many as 4 hover tests in a 2-hour period validating the potential for a 48–72-hour flight turnaround capability, enabling rapid iterative test campaigns that are not possible with expendable vehicles. Exos Aerospace has also established a collaborative relationship with NASA Marshall Space Flight Center through a Data Use Agreement with Mr. Tom Teasley's RDRE research group, enabling the company to leverage NASA's substantial body of RDRE work.

3. AFRL/RJPE is the managing organization for Exos Aerospace's ongoing Phase II SBIR contract (FA9300-25-C-6022) and has direct knowledge of the company's technical progress and capabilities. Based on this firsthand knowledge, I am confident that Exos Aerospace has the technical competence, infrastructure, and management capability to successfully execute the proposed RDRE flight demonstration program.

4. Developing Exos Aerospace's technology with a combination of potential government R&D funding awards and outside private investments can contribute to today's national security efforts and tomorrow's needs for advanced propulsion and missile defense technologies. I offer my strong endorsement of this effort to the TACFI reviewers. If you have any further questions, you can contact me at matthew.harvazinski.1@spaceforce.mil.

5. This letter of support does not constitute a commitment of funding. Selection of Exos Aerospace for an award would provide the initial contract, funding, and opportunity to work with AFRL. AFRL/RJP is postured to support as a stakeholder and advisor to Exos Aerospace post-award and throughout the period of performance to ensure project success.
