DEF-TRNSFNCS

1. Purpose

This document defines the transactions and functions allowed for every user type on the information systems in compliance with NIST 800-171, CMMC 2.0 Level 2, and Department of Defense (DoD) standards for protecting Controlled Unclassified Information (CUI).

2. User Types

The Secure Enclave categorizes users into the following types:

- **User** – Standard users with access to CUI and limited system interactions.
- **Security Admin** – Manages security controls, access permissions, and compliance enforcement.
- **Company Admin** – Oversees system operations, approve Change Management, user account management, and high-level administration.
- **Compliance Admin** – Provides compliance guidance, documentation support, and evidence collection. No management system access.

3. Transactions and Functions per User Type

3.1 User - Transactions and Functions:

- User can use the endpoints to browse the internet
- User can use the endpoints to perform their day-to-day jobs
- User can access CUI data on the endpoints
- User can enroll in authorized systems like Duo, Cloudflare
- User can use all M365 suite tools on their endpoints
- User can use all M365 suite tools on their browsers
- User can use only M365 protected apps on mobile devices
- User is not given any privileged access to any system or endpoint via their standard user account.

3.2 Security Admin - Transactions and Functions:

Security Admin can create, delete and modify users and access

Security Admin can modify all group-based access control on Microsoft Entra ID

Security Admin can conduct all required reviews

Security Admin can receive and act on the alerts

Security Admin can provide Remote Help

Security Admin can read, create, configure all security tooling on systems like Duo, Cloudflare, M365 GCC High

Security Admin can update all policy, procedure and plan documents

Security Admin can read, write, modify, configure and implement all security controls through systems like Microsoft Intune, Microsoft Defender, Duo, Cloudflare, Automox

Security Admin has complete control over systems that help with Incident Response like Microsoft Defender and Microsoft Sentinel

Security Admin can test all the changes

Security Admin can implement the approved changes

Security Admin can perform maintenance on the endpoints

Security Admin can create and configure Entra ID user accounts when transferring an existing device to a new user, provided sufficient licenses are available in the tenant.

3.3 Company Admin - Transactions and Functions:

Company Admin can review and manage users, licenses, and access

Company Admin can review all group-based access control on Microsoft Entra ID

Company Admin can conduct all required reviews

Company Admin can receive alerts

Company Admin can review and approve all policy, procedure and plan documents

Company Admin can review and approve all security controls through systems like Microsoft Intune, Microsoft Defender

Company Admin can review information in systems that help with Incident Response like Microsoft Defender and Microsoft Sentinel

Company Admin can approve all the changes

Company Admin can perform background checks on all users

Company Admin can oversee and coordinate existing device transfers to a new user, including device reconfiguration and handover.

3.4 Compliance Admin - Transactions and Functions:

Compliance Admin can provide compliance guidance

Compliance Admin can update, maintain compliance documentation, policies, procedures, plans

Compliance Admin can provide guidance for evidence collection

Compliance Admin can provide security and risk analysis on changes

4. Updates and Maintenance

- This definition is reviewed annually.
- Non-compliance may result in corrective action, including staff retraining or disciplinary measures.
