Risk Assessment

Risk Indicator	3	D&B Rating		O3
		Financial Strength	O	Based on net worth
		Risk Indicator	3	Fair (Slightly greater than average Risk - Monitor closely)

The Dun & Bradstreet Rating of O3 indicates:
A Financial Strength which is Undisclosed or Not Classified (based on Net Worth) and a Risk Indicator which is Fair (Slightly greater than average Risk - Monitor closely).

D&B Notice on Coronavirus Impact

The World Health Organization declared the novel coronavirus (COVID-19) a global emergency on 30 January 2020. As the human cost escalates, the economic cost is becoming ever more evident, and ever more significant. As individual businesses and various levels of government take steps to prevent the virus spreading by curtailing travel and movement of people, many companies are already seeing an impact on their business. When conducting investigation research, D&B seeks to understand and report on potential business impacts to the subject business, especially around employees and operations. We also attempt to gauge the general maturity of the risk management policies and procedures of the subject business. Findings from our business research are interleaved with the product you are receiving, with any specific findings noted in the Current Investigation section below. For further information, please visit our website below.

Nov 11, 2018
https://meconstructionnews.com
Dubai-based Aras Group recently announced that its helped arrange $816 million worth of funds for over 100 projects for a wide array of sectors ranging from real estate, renewable energy, hospitality, start-ups to refineries and shipping, according to a Trade Arabia news report. A company spokesperson commented: â??Many of the projects are in advanced stage of production and implementation. We have not exited any of them due to their strong growth prospects. We are happy with the way we have been able to support the private sector with our resources and co-financers.â?u

- Order Date

D&B Rating Glossary

D&B Rating - The D&B rating consists of two parts, the Financial Strength Indicator and the Risk Indicator.
For example: in the case of a 2A 4 rating, 2A means the financial strength of the business and the 4 is the risk indicator.
The Risk Indicator is used in conjunction with the Financial Strength Indicator. The Risk Indicator reflects D&B's opinion of a company's health, stability and overall condition. It takes into consideration all significant elements of credit. Such classification is relative and is predicted on the broad and overall view point. Created from expert rules systems, the Risk Indicator is refreshed whenever data is loaded onto our databases. Please see the table below for the Risk Indicators and their corresponding values.

Risk Indicator		
4	Significant level of risk	Take suitable assurances before extending credit
3	Greater than average risk	Proceed with transaction but monitor closely
2	Low risk	Proceed with transaction
1	Minimal risk	Proceed with transaction - offer terms required
-	Insufficient information to assign a risk indicator	No public information or D&B proprietary information available to indicate trading activity

The Financial Strength Indicator is based on either the Net Worth or Issued Capital. The table below contains the possible values.

Financial Strength Indicator		Range	
Net Worth	Capital	From	To
5A	5AA	$60 million	and greater
4A	4AA	$25 million	$60 million
3A	3AA	$12 million	$25 million
2A	2AA	$2.5 million	$12 million
1A	1AA	$1.2 million	$2.5 million
A	AA	$600,000	$1.2 million

B	BB	$345,000	$600,000
C	CC	$175,000	$345,000
D	DD	$120,000	$175,000
E	EE	$60,000	$120,000
F	FF	$35,000	$60,000
G	GG	$15,000	$35,000
H	HH	0	$15,000

Alternate Ratings Used

NQ	Out of Business: Business has ceased to trade
NB	New Business: Less than 24 months
O	Financial Strength is undisclosed; or Assigned to companies that do not request credit in their normal activities (Bank, Brokerages, Insurance Co., Associations, Government, etc..)
N	Negative Net Worth
FB	Foreign Branch
BR	Domestic Branch
DS	Assigned to records that require investigation before a rating can be assigned.

Financial Rating Glossary

Name	Formula	Explanation
Current Ratio (x)	Total Current Assets / Total Current Liabilities	This ratio shows the cover by current assets of short term creditors, and the higher the ratio the more assurance there is that payment of creditors can be met
Solvency Ratio (%)	((Total Current + Deferred + Long Term Liabilities) / Tangible Net Worth) x 100	From this can be seen the extent to which the company is financed by creditors and debt rather than permanent finance. The

		higher the ratio the more likely it is that the debt (either short term or long term) will be a burden to the company. The effect is higher interest changes, lower profits and a squeeze on liquidity to the disadvantage of creditors.
Fixed Assets to Net Worth (%)	(Total Fixed Assets / Tangible Net Worth) x 100	The proportion of net worth that consists of fixed assets will vary greatly from industry to industry, but in general terms a company is under capitalised if fixed assets exceed net worth. In this case it is possible that the company has too much debt, and it should therefore be examined with care. If on the other hand fixed assets are much lower than net worth the company is over capitalised and is either extremely cautious or in a position to expand. Thus a ratio either well in excess of the median, or well below it, means that the company should be looked at with care.
Current Liabilities to Net Worth (%)	(Total Current Liabilities / Tangible Net Worth) x 100	This contrasts the funds that creditors are temporarily risking with a company with the funds permanently invested by the owners. The higher the ratio the less security

		for creditors. Care should be exercised when selling to any company with creditors of less than one year exceeding two thirds of net worth
Asset Turnover (%)	(Turnover / Total Assets(including intangibles)) x 100	This ratio measures how efficiently the company's management has been in generating sales from the assets at its disposal. The measure can vary considerably from industry to industry and should therefore be judged according to the industry norm.
Sales to net working capital (x)	Turnover / Net working capital	This ratio indicates whether a company is overtrading (handing an excessive volume of sales in relation to working capital). Companies with substantial sales gains often reach a level where their working capital becomes strained. Even if they maintain an adequate total investment for the volume being generated (assets to sales) that investment may be so centred in fixed assets or other non-current items that it will be difficult to continue meeting all current obligations. A ratio falling into either an extremely high or low position may indicate

potential
problems.
