Exos Password Vault — Getting Started

Self-hosted & zero-knowledge: your master password never leaves your device; the server only ever stores encrypted data.

1 · Create your account

Go to **https://vault.exosaero.space** → **Create account** → use your **@exosaero.com** email → choose a strong **master password**.

■ Write your master password down somewhere safe. There is **no recovery** for your personal vault if you forget it.

2 · Install the app (recommended)

Install **Bitwarden** from the App Store / Google Play, or the browser extension — it's compatible with our vault. On the login screen, open **Settings (gear)** and set the **Server URL / Self-hosted** field to:

https://vault.exosaero.space

Then log in with your email + master password. You get autofill on your phone and browser.

3 · Turn on two-step login (2FA)

In the web vault: **Settings** → **Security** → **Two-step login** → **Authenticator app.** This protects your account even if your password is exposed. Please do this.

4 · Using it

Personal vault — your private logins, notes, and cards; autofills everywhere.

Shared company vaults — access codes shared to your group appear automatically, no setup on your end.
