SUMMARY OF FINDINGS

Purpose and Scope

We have performed a valuation engagement, as that term is defined in the Statement of Professional Standards of the National Association of Certified Valuators and Analysts ("NACVA"), to estimate the fair market value of EXOS Aerospace Systems & Technologies, Inc.'s common stock as of March 31, 2026 ("Valuation Date").

The valuation was performed on a non-marketable and non-controlling basis and is intended solely to assist EXOS Aerospace Systems & Technologies, Inc. (hereinafter referred to as "EXOS" or the "Company") in determining the fair market value of its common stock for equity compensation planning under Section 409A of the Internal Revenue Code. The conclusion of value should not be used for any other purpose or by any other party.

This valuation engagement was conducted in accordance with the NACVA professional standards. The estimate of value that results from a valuation engagement is expressed as a conclusion of value.

All figures are expressed in United States Dollars ($ or USD) unless otherwise stated.

Summary of Findings

$8.66 per Common Stock

This conclusion is subject to the Statement of Assumptions and Limiting Conditions and to the Valuation Analyst's Representation included in this report. We have no obligation to update this report or our conclusion of value for information that comes to our attention after the date of this report.

Eqvista Inc.

INTRODUCTION

Standard of Value

Revenue Ruling 59-60

We have valued the Company based on a fair market value standard with regards to Internal Revenue Service ("IRS") regulations set forth in Revenue Ruling 59-60 for valuing a closely held company.

According to Revenue Ruling 59-60, the term "fair market value" is defined as "the price at which property would change hands between a willing buyer and a willing seller, when the former is not under any compulsion to buy, the latter is not under any compulsion to sell, and both parties have reasonable knowledge of the relevant facts."

Level of Value

Non-Marketable: As the Company is privately held, the transfer of its shares is subject to constraints, indicating a lack of marketability for the Company's shares

Non-Controlling: The awards/options being granted are on a non-controlling basis, given their limited impact on the Company's overall governance.

Conclusion: This valuation is conducted on a non-marketable and non-controlling basis. Further details about the non-marketability issue can be found in the section titled *Premiums and Discounts*.

Premise of Value

There are two fundamental bases on which a company may be valued:

1. As a going concern, and

2. As if in liquidation

This report is based on the assumption of a going concern valuation premise.

Source of Information

The key information we have received and adopted in our valuation include:

1. The Company's certificate of incorporation, capitalization table, and related corporate documents;
2. The Company’s capitalization table and convertible note information as of the Valuation Date;
3. The Company's balance sheet and profit and loss statements for 2025 and three months ending March 31, 2026;
4. The Company’s financial projections, including monthly P&L, balance sheet, fixed asset schedules, and working capital support used for the DCF analysis;
5. Additional insights and information provided by the management of the Company (“Management”);
6. Publicly available information sources, including FactSet, International Monetary Fund, Damodaran, and Kroll Cost of Capital Navigator; and
7. Other relevant facts and data pertinent to the valuation.

IRC SECTION §409A

Section 409A was added to the Internal Revenue Code on January 1, 2005, and issued final regulations in 2009, and outlines the rules regarding nonqualified deferred compensation plans. For private companies with stock not readily tradable on an established securities market, Section 409A seeks to determine the value of the company's stock at fair market value. Based on the fair market value by the reasonable application of a reasonable valuation method, based on the facts and circumstances of the company.

The presumption of reasonableness, or "safe harbor" methodologies, for setting up the FMV as determined by the IRS can be achieved by:

i) Independent Appraisal

A valuation conducted by a qualified independent appraiser using acceptable appraisal methods, and as of a date no longer than 12 months before the transaction date with no material change from the date of valuation to the transaction date is presumed reasonable. If these requirements are met, the burden of proof is on the IRS that the valuation performed by the independent appraiser is "grossly unreasonable".

ii) Binding Formula Presumption

This valuation method must be based on the consistent application of a single formula and transfer of shares of such class of stock, used for a binding agreement, i.e., buy-sell agreement, trade of company stock to third parties, grant of stocks and options, conversions of notes to stock, and other similar transactions for company stock.

iii) Illiquid Start-Up Presumption

A valuation made both reasonably and in good faith of a private company with business less than 10 years old, not subject to any put, call or other equivalent rights, no stock on established securities markets, not anticipating a sale, IPO or change of significant control in the next 12 months. This valuation must be performed by person with significant knowledge, education, training and at least five years of experience in relevant industries.

If the company fails to meet these requirements, the company may fail to meet the illiquid start-up presumption or not be a reasonable valuation. Therefore, the company should consider other valuation methodologies.

CORPORATE PROFILE

Company Overview

EXOS Aerospace Systems & Technologies, Inc. is a U.S.-based aerospace company focused on space launch, propulsion, and related aerospace systems. The Company's business model is centered on developing and commercializing launch and aerospace hardware capabilities, including propulsion systems and related mission support technologies. The Company's forecast includes revenue from propulsion system sales, Scorpius Space tank sales, SARGE technology sales, BLK4 launcher-related activities, wet lease launches, and second-stage sales.

Shareholding Structure

Exhibition 3: Shareholding Structure

Equity Class	Number of Shares	Fully Diluted (%)
Common Stock	12,346,509	99.42%
Convertible Note - PO 7	56,500	0.45%
Shareholder Notes Payable - Alford	16,129	0.13%
Total	**12,419,138**	**100.00%**

Source: Company.

NATIONAL ECONOMY

According to the Bureau of Economic Analysis, United States ("U.S.") gross domestic product ("GDP") increased by 1.4% (annualized rate) in Q4 2025, after a 4.4% increase in Q3 2025. Growth was supported by consumer spending and private investment, but weaker government spending and exports slowed the pace. For full-year 2025, real GDP increased 2.2% from 2024. Below is the breakdown:

1. Personal Consumption: Increased 2.4%, slower than 3.5% in Q3. Services rose 3.4%, while goods spending edged down 0.1%.

2. Inflation: Core PCE increased 2.7%, down from 2.9% in Q3. The headline PCE price index rose 2.9%, and the gross domestic purchases price index increased 3.7%.

3. Domestic Investment: Gross private domestic investment rose 3.8% after flat growth in Q3. Fixed investment increased 2.6%, led by nonresidential investment (3.7%), equipment (3.2%), and intellectual property products (7.4%), while residential investment fell 1.5%.

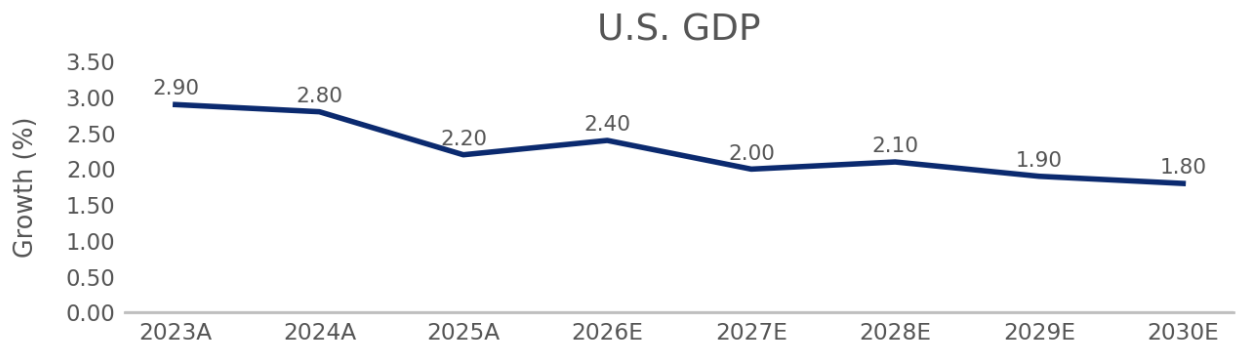

4. Trade: Exports fell 0.9% after rising 9.6% in Q3, and imports fell 1.3% after declining 4.4%. Net exports added 0.08 percentage points to GDP, down from 1.62 percentage points in Q3.

5. Government Expenditure: Declined 5.1% after increasing 2.2% in Q3. Federal spending fell 16.6%, while state and local spending rose 2.4%. BEA estimates the shutdown-related reduction in federal services subtracted about 1.0 percentage point from Q4 growth.

Overall, Q4 2025 growth remained positive, but the headline pace slowed sharply from Q3 as federal spending contracted and exports weakened. Still, full-year growth of 2.2% shows private domestic demand remained resilient.

Outlook: According to the IMF's January 2026 World Economic Outlook Update, U.S. GDP is projected to grow 2.4% in 2026 and 2.0% in 2027. The IMF's October 2025 database suggests growth moderating to 2.1% in 2028, 1.9% in 2029, and 1.8% in 2030.

VALUATION METHODOLOGY OVERVIEW

We considered the following factors in determining the market value of closely held businesses. They are typified by the Internal Revenue Service Ruling 59-60, which issued these factors as a valuation guideline:

- The nature of the business and the history of the enterprise from its inception;
- The economic outlook in general and the conditions and outlook of the industry in particular;
- The book value of the stock and the financial condition of the business;
- The earning capacity of the business;
- The dividend-paying capacity of the business;
- Whether the enterprise has goodwill or other intangible value;
- Prior sales of the stock and the size of the block of stock to be valued; and
- The market price of stocks and the sizes of corporations engaged in the same or a similar line of business having their stocks actively traded on an exchange or over the-counter market.

Valuation Approach

There are three generally accepted approaches to appraise the fair market value of the Company, namely Market Approach, Asset-Based Approach and Income Approach. All three of them have been considered for the valuation of the Company.

The Market Approach

The Market Approach provides an indication of value by comparing the subject asset to similar assets that have been sold in the market, with appropriate adjustments for the differences between the subject asset and the assets that are considered to be comparable to the subject asset.

Under the Market Approach, the Guideline Public Company Method ("GPCM") computes a price multiple for publicly listed companies that are considered to be the guideline public companies ("GPCs") to the subject asset and then applies the result to a base of the subject asset. The Guideline Precedent Transaction Method ("GPTM") computes a price multiple using recent sales and purchase transactions of assets that are considered to be guideline precedent transactions ("GPTs") to the subject asset and then applies the result to a base of the subject asset. The subject company transaction method, also known as Backsolve Approach, involves the utilization of a company's own relevant stock transactions. Utilizing the price at which a recent equity class was issued by the Company or transacted between third parties, the enterprise value which results in a value being assigned to the identified equity class consistent with the issue or transacted price can be calculated using appropriate allocation methodologies.

The Asset-Based Approach

The Asset-Based Approach considers the cost to reproduce or replace in new condition the assets appraised in accordance with current market prices for similar assets, with allowance for accrued depreciation arising from condition, utility, age, wear and tear, or obsolescence (physical, functional, or economical) present, taking into consideration past and present maintenance policy and rebuilding history.

The Income Approach

The Income Approach provides an indication of value based on the principle that an informed buyer would pay no more than the present value of anticipated future economic benefits generated by the subject asset.

The fundamental method for Income Approach is the discounted cash flow ("DCF") method. Under the DCF method, the value depends on the present value of future economic benefits to be derived from ownership of the enterprise. Thus, an indication of the equity value is calculated as the present value of the future free cash flow of a company less outstanding interest-bearing debt, if any. The future cash flow is discounted at the market-derived rate of return appropriate for the risks and hazards of investing in a similar business.

Valuation Analyst's Decision

Exhibition 5: Selection of Valuation Approach

Valuation Approach	Decision	Rationale
Asset-Based Approach	Rejected	Does not adequately reflect the Company's expected future economic benefits.
Market Approach - GPTM	Rejected	Limited relevant transaction data was available as of the Valuation Date.
Market Approach - GPCM	Adopted	Publicly traded aerospace, defense, and space-related companies provide observable market multiples.
Income Approach – DCF Method	Adopted	Management provided updated projections with sufficient support for a forward-looking FCFF analysis.
Market Approach - Backsolve	Rejected	No recent arm's-length financing transaction was available for backsolve calibration.

We adopted the Market Approach using the Guideline Public Company Method ("GPCM") because selected publicly traded aerospace, defense, and space-related companies provide observable market valuation multiples. We also adopted the Income Approach using the DCF Method because Management provided projections that can be used to estimate prospective free cash flow to the firm.

Accordingly, we weighted the Market Approach and Income Approach equally at 50% each. The Asset-Based Approach was not adopted because it does not adequately reflect the Company's expected future economic benefits, and the Market Approach - GPTM and Backsolve Method were not adopted due to the lack of relevant transaction or financing data.

THE MARKET APPROACH

Guideline Public Company Method

Under the Guideline Public Company Method ("GPCM"), we searched for publicly traded companies operating in aerospace, defense, space systems, launch services, and related mission technology markets. The selected GPCs provide observable market data for companies exposed to aerospace and space-related demand, technical execution risk, and government or commercial space customers. The selected GPCs are presented in *Guideline Public Company Information*.

Selection of Valuation Multiples

We have considered various multiples in the valuation, such as the earning-based multiples: EV/EBITDA (Enterprise value to earnings before interest, tax, depreciation, and amortization) and P/E (Price to Earnings), assets-based multiple: P/B (Price to Book), and revenue-based multiples: EV/S (Enterprise value to Sales) and P/S (Price to Sales).

Regarding the assets-based multiple, **we rejected the use of P/B** because the book value of equity is incapable to reflect the values of intangible assets possessed by the Company.

Regarding the earning-based multiples, we rejected the use EV/EBITDA and P/E as the Company's profitability is unstable, making the use of earning-based multiples inappropriate.

Regarding the revenue-based multiples, we adopted EV/S as it allows for comparisons among the companies with different capital structure, and the ratio tends to be more stable. We rejected the use of P/S as it is distorted by variations in the capital structure among the GPCs.

Determination of Trading Multiple

Based on the selected GPCs, we adopted the median 2028 EV/Revenue multiple of 2.53x. The median was selected because it reduces the impact of outliers in the public company set.

Value Indication

The following table presents the equity value calculation under the Market Approach - GPCM.

Exhibition 6: Equity Value Derived by Market Approach

(In USD)	2028 EV/S
Selected Multiple	2.53x
Projected FY2028 Revenue	67,936,260
Market Value of Enterprise Value	**172,148,373**
Add: Cash & Cash Equivalents	273,507
Less: Debt	(339,932)
Indicated Equity Value	**172,081,948**

Source: FactSet, Management projections, and the Company's balance sheet as of March 31, 2026.

The Market Approach indicated an equity value of approximately $172,081,948. The value derived from the Market Approach - GPCM is on a marketable and non-controlling basis because it is based on minority interests traded in public markets. Therefore, no control adjustment was applied. A discount for lack of marketability was considered separately in deriving the common stock fair market value.

THE INCOME APPROACH

Discounted Cash Flow Method

Considering the Company's forecasted revenue ramp-up and expected profitability, we applied the DCF method under the Income Approach. The DCF method was considered appropriate because it captures Management's forecasted revenue, EBITDA, capital expenditure, working capital needs, tax burden, and terminal value.

We selected FCFF as the cash flow basis. Under this method, cash flows available to all providers of capital are discounted at the weighted average cost of capital ("WACC") to estimate enterprise value. Cash and debt adjustments are then applied to arrive at equity value.

The key distinction between free cash flow to firm ("FCFF") and free cash flow to equity ("FCFE") lies in their treatment of debt. FCFF incorporates the value of debt as of the Valuation Date through the net debt adjustment, thereby arriving at the equity value. On the other hand, FCFE explicitly considers debt financing and repayment throughout the projection period in the cash flow projection, ultimately arriving at the equity value. Additionally, FCFF is discounted to present value using the weighted average cost of capital, while FCFE is discounted to PV using the cost of equity.

$$PV = \sum_{t=1}^{t=n} \frac{CF_t}{(1+k)^t}$$

- PV = *Present Value of sum FCFF*
- CF_t = *FCFF at time t.*
- k = *WACC*
- n = *Number of projection periods*

After calculating the PV of FCFF for the projection period, it is important to also consider the Terminal Value of the company. The Terminal Value indicates the value of the company for succeeding periods beyond the forecasted period. A common approach to determine the terminal value of the company is by adapting the Perpetual Growth Model ("PG Model). The PG Model assumes that the company will generate stable cashflow at a constant rate continues indefinitely.

The Terminal Value is determined using the following formula under the PG Model:

$$Terminal\ Value = \frac{CF_n * (1+g)}{(k-g)}$$

- CF_n = *FCFF of last projection period*
- g = *Terminal growth rate*
- k = *WACC*

The Terminal Value is the sum of indefinite cash flows expected in periods beyond the projection period. It is crucial to discount the Terminal Value back to the present to accurately assess its current worth.

Discount and Capitalization Rates

In the application of certain fundamental valuation factors, such as earnings and dividends, it is necessary to capitalize the average or current results at some appropriate rate. A determination of the proper capitalization rate presents one of the most difficult problems in valuation.

As we are using the FCFF model, the relevant discount rate is WACC, which is a combination of the cost of the company's equity and the cost of the company's debt. It represents the overall cost of capital from various sources within the company, taking into account both equity and debt financing. The formula for the WACC method is as follows:

$$WACC = \frac{E}{D+E} * k_E + \frac{D}{D+E} * k_D * (1-T)$$

- *E=Market value of the equity*
- *D=Market value of the debt*
- *K_E=Cost of equity derived from Capital Assets Pricing Model*
- *K_D=Cost of debt*
- *T=Corporate income tax rate*

Estimation of Cost of Equity

We have used the Capital Asset Pricing Model ("CAPM") to estimate the cost of equity for the Company.

Under the CAPM, the cost of equity is the combination of the risk-free rate and the additional return that investors expect for taking on market risk. It's important to note that the cost of equity for a specific company, like the Company, can also be influenced by other factors unique to the Company, such as its size. The discount rate used in valuation is determined based on the current risk-free rate, the expected market return, the estimated beta of the Company, and any specific risk factors relevant to the Company at the given Valuation Date. The equation for the cost of equity is as follow:

$$K_e = R_f + \beta * ERP + CRP + SP + CSRP$$

- *K_E = Adopted Company's cost of equity*
- *Rf = 5-year United States government bond yield as of the Valuation Date, sourced from FactSet*
- *β = Average relevered Beta among the selected GPCs*
- *ERP = Mature market equity risk premium, sourced from Professor Aswath Damodaran*
- *CRP = Country risk premium, sourced from Professor Aswath Damodaran*
- *SP = Size premium required to invest in small companies, sourced from the 2025 Cost of Capital Navigator by Kroll, LLC*
- *CSRP = Company Specific Risk Premium*

Details of cost of equity are presented in *Calculation of Weighted Average of Cost of Capital*.

Estimation of Cost of Debt

The Company's adopted pre-tax cost of debt is 14.09%, with reference to the U.S. High Yield (CCC & Lower) as of Valuation Date sourced from FactSet.

Determination of WACC

The Company's WACC is estimated at 21.52%. Details of the calculation are presented in Calculation of Weighted Average Cost of Capital.

Present Value of Free Cash Flow to Firm and Terminal Value

Free Cash Flow to Firm

We derived FCFF using Management's Financial Projections. FCFF calculations start with EBIT, deduct taxes on EBIT to derive NOPAT, and adjust for depreciation and amortization, capital expenditures, and changes in working capital.

Details of present value of free cash flows are presented in *Present Value of Free Cash Flows.*

Terminal Value

Terminal value was calculated using the Perpetuity Growth Model, based on the terminal year cash flow, the selected long-term growth rate, and the WACC.

Details of present value of Terminal Value are presented in *Present Value of Terminal Value.*

Equity Value

The Income Approach indicated an equity value of approximately $167,319,636. Details are presented below:

Exhibition 7: Equity Value of the Company under DCF Method

(In USD)	Value	Reference
Sum of PV FCFF	28,287,156	Present value of forecast-period FCFF
PV of Terminal Value	139,098,904	Perpetuity Growth Model
Operating Enterprise Value	167,386,060	Sum of PV FCFF and terminal value
Plus: Cash and Cash Equivalents	273,507	Balance sheet as of March 31, 2026
Less: Debt	(339,932)	Balance sheet as of March 31, 2026
Indicated Equity Value	**167,319,636**	**Income Approach - DCF Method**

CONCLUSION OF EQUITY VALUE

We weighted the Market Approach and Income Approach at 50.0% each. The Market Approach captures observable public company pricing, while the Income Approach captures Management's forward-looking free cash flow expectations. Based on this weighting, the concluded equity value used in the allocation analysis was $169,700,792.

The weighted conclusion is presented below:

Exhibition 8: Concluded Equity Value of the Company

(In USD)	Value	Weight	Weighted Value
Market Approach - GPCM	172,081,948	50%	86,040,974
Income Approach - DCF Method	167,319,636	50%	83,659,818
Value of 100% Equity Interest in EXOS			**169,700,792**

ALLOCATION OF EQUITY

The American Institute of Certified Public Accountants (“AICPA”) guidelines allow for three unique methods of allocating enterprise value to differing security holders in the capitalization schedule: the Current Value Method ("CVM"), the Probability-Weighted Expected Return Method ("PWERM"), and the Option Pricing Method ("OPM"). Each of these allocation methods were considered in estimating the fair market value of the Company's stock.

When the company has a complex equity structure, where the equity classes have different preferential rights, exercise price, conversion price, OPM is often carried out to calculate the distribution of the company’s equity value. This is because the Waterfall Analysis displays the sequential breakdown of the company’s equity value in intermediate values/thresholds that individual equity class is entitled to receive according to pre-established rights in the agreement.

The Option Pricing Method was considered appropriate given the Company’s anticipated exit date, and uncertainty regarding future returns, and the complex equity structure.

Option Pricing Method

We estimated the fair market value of the Company’s classes of equity using the OPM with the Breakpoint Analysis and Option Pricing Method. The OPM treats equity classes, both common and preferred stock, as call options on the company's equity value, with exercise prices reflecting the liquidation preferences of preferred stockholders. This approach values common stock only when available funds for distribution exceed the liquidation preferences at a liquidity event, such as a merger or sale, provided there are adequate funds to honor these preferences.

In our model, the Company's stock classes are akin to call options, granting the right (but not the obligation) to purchase the underlying enterprise value at a predetermined exercise price. This exercise price correlates with the enterprise value, not a per-share price, making common securities a call option with a claim on the enterprise at an exercise price equivalent to the preferred stock's liquidation preference. We commonly employ the Black-Scholes model for valuing these options.

The OPM accounts for various terms in stockholder agreements, including security seniority, dividend policies, conversion ratios, and cash allocations, focusing on the impact of liquidation preferences as of the future liquidation date, not as of the Valuation Date.

CONCLUSION OF COMMON STOCK VALUE

Based on the 50.0% weighting to the Market Approach - GPCM and 50.0% weighting to the Income Approach - DCF Method, the concluded equity value used in the allocation analysis was $169,700,792. Based on the breakpoints and capital structure as detailed in *Option Pricing Model to Allocate Value*, the fair market value of Common Stock is estimated at $8.66 per share on a non-marketable and non-controlling basis as of March 31, 2026. The details of the discount for lack of marketability are presented in the section *Premiums and Discounts*.

PREMIUMS AND DISCOUNTS

Valuation Premiums and Discounts in General

The final value reached in the valuation of a closely-held business may be more or less than the value that was calculated using the various methods of valuation that are available. The type and size of the premium(s) or discount(s) will vary depending on the starting point. The starting point will depend on which methods of valuation were used during the valuation as well as other factors, such as the sources of the information used to derive multiples or discount rate, and normalization adjustments. These premiums and discounts will also depend on the standard of value applied in the valuation.

Discount for Lack of Marketability

A discount for lack of marketability is used to compensate for the difficulty of selling shares of stock that are not traded on a stock exchange compared with those that can be traded publicly. Publicly-traded stocks frequently have an element of liquidity that closely-held shares do not. This is the reason that a DLOM may be applied. It is intended to reflect the market's perceived reduction in value for not providing liquidity to the shareholder. Also, it is important to understand that liquidity is not an on-off switch, where you either have it or you do not. Rather, liquidity is a continuum where there are varying degrees in both the public market and for private companies.

A DLOM may also be appropriate when the shares have either legal or contractual restrictions placed upon them. These may be in the form of restricted stock, restrictions resulting from buy-sell agreements, bank loan restriction, or other types of contracts that restrict the sale of shares.

Discount for Lack of Marketability - Empirical Studies

Exhibition 9: **Empirical Studies**

DLOM – Quantitative Analysis

To quantitatively determine the DLOM in stock option models, we have employed the Black-Scholes option pricing model.

Using the Black Scholes option pricing model, we calculated the values of put options using the volatility of the similar public companies. By purchasing an "at the money" put option on these companies, an investor can protect the market price of his or her investment by locking in the market price of his or her position, which defends against a drop in market value.

In calculating the value of put options on the Company, we used the combination of (1) Finnerty, and (2) Chaffe model with the following inputs:

- Term of 5 years, consistent with the expected time to exit used in the OPM allocation.
- The 5-year median equity volatility of the GPCs of 76.96%.
- The 5-year United States government bond yield as of the Valuation Date of 3.94% was adopted as the risk-free rate.

The option pricing models indicated DLOM references including Finnerty at 29.42%, Asian Protective Put at 33.19%, and Chaffe at 46.92%.

Discount for Lack of Marketability - Adopted Value

In this valuation, we relied upon the option pricing model and adopted a DLOM of 36.51%, the average of DLOM Finnerty, DLOM Chaffe and DLOM Asian Put.

ASSUMPTIONS AND LIMITING CONDITIONS

1. The conclusion of value arrived at herein is valid only for the stated purpose as of the date of the valuation.

2. Financial statements and other related information provided by the business or its representatives, in the course of this engagement, have been accepted without any verification as fully and correctly reflecting the enterprise's business conditions and operating results for the respective periods, except as specifically noted herein. Eqvista, Inc. has not audited, reviewed, or compiled the financial information provided to us and, accordingly, we express no audit opinion or any other form of assurance on this information.

3. Public information and industry and statistical information have been obtained from sources we believe to be reliable. However, we make no representation as to the accuracy or completeness of such information and have performed no procedures to corroborate the information.

4. We do not provide assurance on the achievability of the results forecasted by or for the subject company because events and circumstances frequently do not occur as expected; differences between actual and expected results may be material; and achievement of the forecasted results is dependent on actions, plans, and assumptions of management.

5. The conclusion of value arrived at herein is based on the assumption that the current level of management expertise and effectiveness would continue to be maintained, and that the character and integrity of the enterprise through any sale, reorganization, exchange, or diminution of the owners' participation would not be materially or significantly changed.

6. This report and the conclusion of value arrived at herein are for the exclusive use of our client for the sole and specific purposes as noted herein. They may not be used for any other purpose or by any other party for any purpose. Furthermore, the report and conclusion of value are not intended by the author and should not be construed by the reader to be investment advice in any manner whatsoever. The conclusion of value represents the considered opinion of Eqvista, Inc., based on information furnished to them by the subject company and other sources.

7. Neither all nor any part of the contents of this report (especially the conclusion of value, the identity of any valuation specialist(s), or the firm with which such valuation specialists are connected or any reference to any of their professional designations) should be disseminated to the public through advertising media, public relations, news media, sales media, mail, direct transmittal, or any other means of communication without the prior written consent and approval of Eqvista, Inc.

8. Future services regarding the subject matter of this report, including, but not limited to testimony or attendance in court, shall not be required of Eqvista, Inc. unless previous arrangements have been made in writing.

9. Eqvista, Inc. has not determined independently whether the subject company is subject to any present or future liability relating to environmental matters (including, but not limited to CERCLA/Superfund liability) nor the scope of any such liabilities. Eqvista, Inc.'s valuation takes no such liabilities into account, except as they have been reported to Eqvista, Inc. by the subject company or by an environmental consultant working for the subject company, and then only to the extent that the liability was reported to us in an actual or estimated dollar amount. Such matters, if any, are noted in the report. To the extent such information has been reported to us, Eqvista, Inc. has relied on it without verification and offers no warranty or representation as to its accuracy or completeness.

10. No change of any item in this valuation report shall be made by anyone other than Eqvista, Inc., and we shall have no responsibility for any such unauthorized change.

11. Unless otherwise stated, no effort has been made to determine the possible effect, if any, on the subject business due to future Federal, state, or local legislation, including any environmental or ecological matters or interpretations thereof.

12. We have conducted interviews with the current management of the subject company concerning the past, present, and prospective operating results of the company. Except as noted, we have relied on the representations of these individuals.

13. Except as noted, we have relied on the representations of the owners, management, and other third parties concerning the value and useful condition of all equipment, real estate, investments used in the business, and any other assets or liabilities, except as specifically stated to the contrary in this report. We have not attempted to confirm whether or not all assets of the business are free and clear of liens and encumbrances or that the entity has good title to all assets.

14. All facts and data set forth in the report are true and accurate to the best of the valuation analyst's knowledge and belief. We have not knowingly withheld or omitted anything from our report affecting our value estimate.

15. Possession of this report, or a copy thereof, does not carry with it the right of publication of all or part of it, nor may it be used for any purpose without the previous written consent of the valuation analyst, and in any event only with proper authorization.

16. Unless otherwise provided for in writing and agreed to by both parties in advance, the extent of the liability for the completeness or accuracy of the data, opinions, comments, recommendations and/or conclusions shall not exceed the amount paid to the valuation analysts for professional fees and then, only to the party(s) for whom this report was originally prepared.

17. The conclusion reached in this report is based on the standard of value as stated and defined in the body of the report. An actual transaction in the business or business interest may be concluded at a higher value or lower value, depending on the circumstances surrounding the company, the subject business interest and/or the motivations and knowledge of both the buyers and sellers at that time. Eqvista, Inc. makes no guarantees as to what values individual buyers and sellers may reach in an actual transaction.

18. No opinion is intended to be expressed for matters that require legal or other specialized expertise, investigation or knowledge beyond that customarily employed by valuation analysts valuing businesses.

VALUATION ANALYST'S REPRESENTATION

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions, and conclusions are limited only by the reported assumptions and limiting conditions and are our personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- We have no present or prospective interest in the property that is the subject of this report, and we have no personal interest with respect to the parties involved.
- We have performed no services, as a valuation analyst or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment.
- We have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- Our engagement in this assignment was not contingent upon developing or reporting predetermined results.

Appendix 2 Guideline Public Company Information

2.1 Selection of Guideline Public Companies

The valuation analyst searches for publicly traded companies in the same or similar business, uses pricing multiples based on these companies' market prices and financial data to derive a value of the subject company. To apply this method, we performed a search in FactSet to find GPCs with the following criteria:

1. Industry: The GPCs operate in aerospace, defense, space systems, launch services, satellite, or related mission technology markets;
2. Stock Exchange Listing: The GPCs are publicly traded on U.S. exchanges;
3. Listing days: The GPCs have been listed over three years and were actively traded around the Valuation Date; and
4. Publicly Available Financials: The GPCs must have financial information readily available to the public.

The list of GPCs based on the above selection criteria is considered to be exhaustive. Despite the fact that there may exist some differences between these companies and the Company, in general, we still believe their financial information is relevant and of use in comparing the performance and operations of the Company.

2.2 GPCs' Description per FactSet

Ticker	Company Name	Description
NOC-US	Northrop Grumman Corp.	Northrop Grumman Corp. engages in the provision of advanced aircraft systems. It operates through the following segments: Aeronautics Systems, Defense Systems, Mission Systems, and Space Systems. The Aeronautics Systems segment is involved in the design, development, production, integration, sustainment, and modernization of advanced aircraft systems for the U.S. Air Force, the U.S. Navy, other U.S. government agencies, and international customers. The Defense Systems segment includes integrated battle management systems, weapons systems and aircraft, and mission systems sustainment and modernization. The Mission Systems segment offers advanced mission solutions and multifunction systems, primarily for the U.S. defense and intelligence community, and international customers. The Space Systems segment delivers end-to-end mission solutions through the design, development, integration, production and operation of space, missile defense, launch and strategic missile systems for national security, civil government, commercial, and international customers. The company was founded by John K. Northrop, Thomas V. Jones, and Kent Kresa in 1939 and is headquartered in Falls Church, VA.
MOG.A-US	Moog Inc. Class A	Moog, Inc. is a designer, manufacturer, and systems integrator of precision motion and fluid controls and systems for applications in aerospace and defense and industrial markets. It operates through the following segments: Space and Defense, Military Aircraft, Commercial Aircraft, Industrial, and Corporate Headquarters. The company was founded by William C. Moog, Arthur Moog, and Lou Geyer in 1951 and is headquartered in East Aurora, NY.
RDW-US	Redwire Corp	Redwire Corp. manufactures and supplies space equipment. It offers critical space solutions and reliability components for the next generation space economy with IP for solar power generation and in-space 3D printing and manufacturing. It assists its customers in solving challenges of future space missions. The company was founded in 2020 and is headquartered in Jacksonville, FL.
RKLB-US	Rocket Lab Corporation	Rocket Lab Corp. engages in the development of rocket launch and control systems for the space and defense industries. It operates through the Launch Services and Space Systems segments. The Launch Services segment provides launch services to customers on a dedicated mission or ride-share basis. The Space Systems segment consists of spacecraft engineering and design services, spacecraft components, spacecraft manufacturing, and on-orbit mission operations. The company was founded by Peter Beck in 2006 and is headquartered in Long Beach, CA.
LUNR-US	Intuitive Machines, Inc. Class A	Intuitive Machines, Inc. is a space exploration, infrastructure, and services company, which engages in contributing to the establishment of cislunar infrastructure and helping to develop cislunar and deep space commerce. It offers space products and services. The company was founded by Stephen J. Altemus, Kam Ghaffarian, and Timothy P. Crain in 2013 and is headquartered in Houston, TX.
SPCE-US	Virgin Galactic Holdings Inc	Virgin Galactic Holdings, Inc. is an aerospace and space travel company, which engages in the provision of consumer space experience using reusable spaceflight systems. The firm is also involved in designing, developing, and manufacturing, ground and flight testing, spaceflight operation, and post-flight maintenance of spaceflight systems. The company was founded on May 5, 2017 and is headquartered in Tustin, CA.
SIDU-US	Sidus Space, Inc. Class A	Sidus Space, Inc. is a space-as-a-service company. The firm focuses on commercial satellite design, manufacture, launch planning, mission operations and in-orbit support, and data collection with a vision to demonstrate space operations for new technologies, and deliver data and predictive analytics to both domestic and global customers. The company was founded by Carol M. Craig on July 17, 2012 and is headquartered in Merritt Island, FL.

LHX-US	L3Harris Technologies Inc	L3Harris Technologies, Inc. engages in the provision of defense and commercial technologies across the air, land, sea, space, and cyber domains. It operates through the following segments: Communication Systems, Integrated Mission Systems, Space and Airborne Systems, and Aerojet Rocketdyne. The Communication Systems segment enables warfighters across all domains with solutions critical to mission success even in the most contested environments. The Integrated Mission Systems segment focuses on the differentiated mission capabilities and prime systems integration for the air, land, and sea domains. The Space and Airborne Systems segment provides full mission solutions as a prime and subsystem integrator in the space, airborne, and cyber domains. The Aerojet Rocketdyne segment includes propulsion, power and armament products and systems to U.S. government, including the DoD, National Aeronautics and Space Administration ("NASA") and major aerospace and defense prime contractors. The company was founded in 1890 and is headquartered in Melbourne, FL.
LMT-US	Lockheed Martin Corporation	Lockheed Martin Corp. is a global security and aerospace company, which engages in the research, design, development, manufacture, integration, and sustainment of technology systems, products, and services. It operates through the following business segments: Aeronautics, Missiles and Fire Control (MFC), Rotary and Mission Systems (RMS), and Space. The Aeronautics segment researches, designs, develops, manufactures, integrates, sustains, supports, and upgrades advanced military aircraft, including combat and air mobility aircraft, unmanned air vehicles, and related technologies. The MFC segment is involved in air and missile defense systems, tactical missiles and air-to-ground precision strike weapon systems, logistics, fire control systems, mission operations support, readiness, engineering support and integration services, manned and unmanned ground vehicles, and energy management solutions. The RMS segment designs, manufactures, services, and supports various military and commercial helicopters, surface ships, sea and land-based missile defense systems, radar systems, sea and air-based mission and combat systems, command and control mission solutions, cyber solutions, and simulation and training solutions. The Space segment includes the production of satellites, space transportation systems, and strategic, advanced strike, and defensive systems. The company was founded in 1995 and is headquartered in Bethesda, MD.

LMT-US	139,956	158,157			1.82x
Summary					**Multiple**
Median					2.53x
Average					2.66x
Adopted (Median)					**2.53x**

1. *In millions of USD. Sourced from FactSet as of the Valuation Date. EV is calculated as (Market Capitalization as of or closest and prior to the Valuation Date + Debts + Lease Liabilities + Preferred Stock + Minority Interest – Cash and Cash Equivalent – Investments), with reference to the precedent financial report sourced from FactSet.*
2. *Excluded as an outlier. "N/A" refers to not available.*

2.4 Volatility of GPCs

The 5-year equity volatility and asset volatility of the GPCs as of the Valuation Date are as follows:

Ticker	5-Year Equity Volatility
NOC-US	24.93%
MOG.A-US	30.83%
RDW-US	89.55%
RKLB-US	76.96%
LUNR-US	172.75%
SPCE-US	91.94%
SIDU-US	230.17%
LHX-US	23.66%
LMT-US	22.59%
Median	76.96%
Average	84.82%
Adopted	**76.96%**

Appendix 3 Discounted Cash Flow Method

3.1 Calculation of Relevered Beta

Ticker	Adjusted 5-Year Beta	D/E	Tax Rate	Unlevered Beta	Relevered Beta
NOC-US	0.49	15.58%	25.63%	0.44	0.53
MOG.A-US	1.00	14.03%	25.63%	0.91	1.10
RDW-US	1.65	9.51%	25.63%	1.55	1.87
RKLB-US	1.66	0.13%	25.63%	1.65	2.00
LUNR-US	0.88	7.97%	25.63%	0.83	1.01
SPCE-US	1.70	162.50%	25.63%	0.77	0.93
SIDU-US	1.52	9.98%	25.63%	1.42	1.71
LHX-US	0.63	17.43%	25.63%	0.56	0.67
LMT-US	0.50	14.79%	25.63%	0.45	0.55
Adopted		**27.99%**	**25.63%**		**1.15**

Source: FactSet

1. *Beta were adjusted to reflect the assumption that Beta converge over time toward the average of the market (Beta=1). Blume adjusted beta is calculated as* $\frac{1}{3} \times 1 + \frac{2}{3} \times 5 - Year\ Beta$
2. *Beta is relevered using the average D/E ratio of the selected GPCs and the tax rate of the Company.*
3. *Average of the selected GPCs'.*
4. *Company's tax rate.*

3.2 Calculation of Weighted Average of Cost of Capital

Parameters	Adopted	Reference
Risk-Free Rate, Rf	3.94%	5-year United States government bond yield as of the Valuation Date, sourced from FactSet
Equity Risk Premium, ERP	4.23%	Mature market equity risk premium sourced from Professor Aswath Damodaran
Beta	1.15	Average adjusted 5-year beta among the selected GPCs
Cost of Equity, Ke	**8.81%**	**Derived from CAPM**
Country Risk Premium, CRP	0.23%	Country risk premium sourced from Professor Aswath Damodaran
Size Premium, SP	10.57%	10z decile sourced from 2025 Cost of Capital Navigator by Kroll, LLC
Company Specific Risk Premium, CSRP	5.00%	Professional judgment; execution and company-specific risk
Adopted Cost of Equity, Ke	**24.61%**	**Cost of equity derived from CAPM plus CRP and SP and CSRP**
Adopted Cost of Debt (pre-tax)	14.09%	U.S. High Yield (CCC & Lower) as of Valuation Date sourced from FactSet
Adopted Cost of Debt (post-tax)	**10.48%**	**Pre-tax cost of debt adjusted for tax rate**
% of Debt	21.87%	Average D/(D+E) of the GPCs
% of Equity	78.13%	1 minus % of Debt
WACC	**21.52%**	**Weighted average cost of capital**

1. $WACC = \frac{E}{D+E} * K_E + \frac{D}{D+E} * K_D$ *where E = Market value of the equity, D = Market value of the debt*
2. $K_e = R_f + \beta * ERP$
3. $K_E = K_e + \mathrm{CRP} + SP + CSRP$

3.3 Present Value of Free Cash Flows

(In USD)	FY2026 Stub	FY2027	FY2028	FY2029

1. *Mid-Year Convention.*

3.4 Present Value of Terminal Value

PG Model

(In USD)	Value	Reference
Terminal Value	262,089,827	Terminal Value = FY2029 FCFF × (1 + terminal growth rate) / (WACC - terminal growth rate)
Discount Factor	0.53	Mid-year convention
PV of Terminal Value	**139,098,904**	**Present value of terminal value**

3.5 Enterprise Value and Equity Value under DCF Method

(In USD)	PG Model
Sum of PV FCFF	28,287,156
PV of Terminal Value	139,098,904
Operating Enterprise Value	**167,386,060**
Plus: Cash and Cash Equivalents	273,507
Less: Debt	(339,932)
Indicated Value of Equity	**167,319,636**

1. *With reference to the balance sheet as of March 31, 2026.*
2. *Cash and debt adjustments are based on the balance sheet as of March 31, 2026.*

Appendix 4 Option Pricing Model to Allocate Value

4.1 Capitalization Table

Before carrying out the breakpoint analysis, the details regarding individual equity classes such as liquidation preference ("LP") are considered and summarized as below:

Equity Class	Number of Stock	Price [1]	LP Right [2]	LP Seniority [3]	LP Multiple	Conversion Right [4]	Conversion Multiple
Common Stock	12,346,509	0.00	N	N/A	N/A	Y	1.00x
Convertible Note - PO 7	56,500	10.00	Y	1	1.00x	Y	1.00x
Shareholder Notes Payable - Alford	16,129	12.40	Y	1	1.00x	Y	1.00x

Source: Company.

1. *In USD. Refers to issue price or strike price or conversion price, sourced from the Company.*
2. *LP Right: "Y" indicates the equity class has liquidation preference or equivalent right.*
3. *LP Seniority: Rank in ascending order, with 1 being the most senior equity class. "N/A" refers not applicable.*
4. *Conversion Right: "Y" indicates the equity class can convert into common stocks.*

4.2 Breakpoint Analysis

The first step in applying the option pricing method is to determine the claims on the equity value and the resulting "breakpoints ("BP")" or "transition points at which the different classes of equity would benefit". The transition points used in the model are the theoretical liquidation values beyond which the allocation of value changes, based on the liquidation preferences, dividend, participation rights and conversion rights of the preference and other types of equity classes**.**

These transition points/breakpoints represent thresholds at which the relative allocation of value changes between the classes. The breakpoint points for the Company are as:

BP	Transition Value [1]		Transition Price [1]	Event
	From	To		
1	0	765,000	0.00	Convertible Note - PO 7 and Shareholder Notes Payable - Alford receive liquidation preference
2	765,000	124,230,090	10.00	Common Stock receives value
3	124,230,090	153,997,312	12.40	Convertible Note - PO 7 conversion threshold
4	153,997,312	Infinity	Infinity	Shareholder Notes Payable - Alford conversion threshold

1. *In USD.*

4.3 Option Pricing Method - Option Value and Distribution of Value

BP	Current Equity Value [1]	Exercise price [1]	Maturity [2]	Risk-free Rate [3]	Volatility [4]	Call Option Value [1]	Incremental Value [5]
1	169,700,792	0.00	5.0	3.94%	76.96%	169,700,792	626,151
2	169,700,792	765,000.00	5.0	3.94%	76.96%	169,074,641	49,569,381
3	169,700,792	124,230,090.00	5.0	3.94%	76.96%	119,505,260	6,469,935
4	169,700,792	153,997,311.60	5.0	3.94%	76.96%	113,035,325	113,035,325

1. *In USD.*
2. *Refers to time to exit per Company's advice.*
3. *Risk-free Rate: 5-year United States government bond yield as of Valuation Date, sourced from FactSet.*
4. *The 5-year median equity volatility of the GPCs sourced from FactSet.*
5. *In USD. Incremental Value$_n$ – calculated as Call Option Value of Breakpoint$_n$ – Call Option Value of Breakpoint$_{n+1}$. This value indicates the fund distributable to equity classes that are engaged in Breakpoint$_n$.*

4.4 Distribution of Value

The value distributed to individual equity class in each breakpoint is presented below:

(In %)	1	2	3	4
Common Stock	0.00%	100.00%	99.54%	99.42%
Convertible Note - PO 7	73.86%	0.00%	0.46%	0.45%
Shareholder Notes Payable - Alford	26.14%	0.00%	0.00%	0.13%
Total	**100.00%**	**100.00%**	**100.00%**	**100.00%**

(In USD)	1	2	3	4	Total
Common Stock	0	49,569,381	6,440,462	112,374,277	168,384,120
Convertible Note - PO 7	462,451	0	29,473	514,246	1,006,170
Shareholder Notes Payable - Alford	163,700	0	0	146,802	310,501
Total	**626,151**	**49,569,381**	**6,469,935**	**113,035,325**	**169,700,792**

4.5 Valuation of Each Equity Class

Equity Class	Total Value [1]	Number of Shares	Price per Share [1]	DLOM [1][2]	Fair Market Value [1]
Common Stock	**168,384,120**	**12,346,509**	**13.64**	**(4.98)**	**8.66**
Convertible Note - PO 7	1,006,170	56,500			
Shareholder Notes Payable - Alford	310,501	16,129			
Total	**169,700,792**	**12,419,138**
